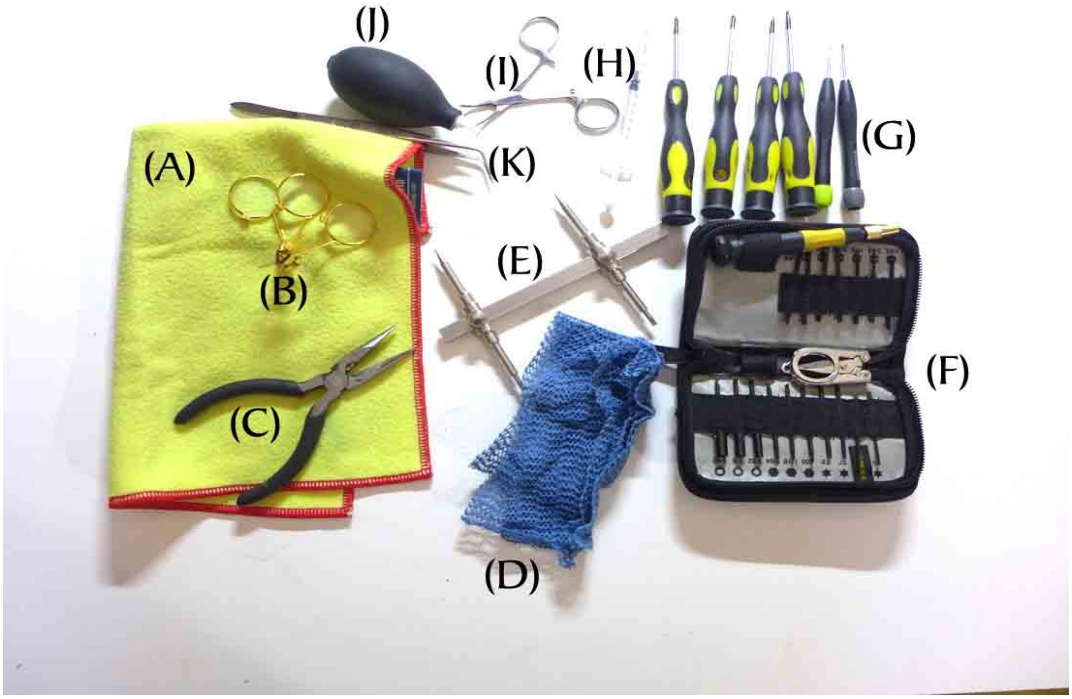
My Personal Portable Lens Repair Tools

Sometimes when on trips, I have repaired my lenses for one reason or another. This set of tools are not the best top grade, but will work well for emergency repairs.

Pouch For Lens Tools
(Yeah! It's a Cut-Off Leg part of some blue jeans)



A) Micro-Cloth.

B) Clip-On “Jewelers” Magnifier loops.

C) Hose Plyers.

D) “Rubber Cloth” - (For gripping).

E) Lens Spanner Wrench (Points & Blades).

F) Small Screwdrivers in case.

G) Larger (still small) Screwdrivers.

H) Small Syringe (not seen to well) With Very Thin Needle. For Oiling.

I) Small Locking Forceps.

J) Squeeze Bulb (For blowing out dust).

K) Tweezers (45 degree angle). Not shown = Another straight pair.

There is a bit more to the list - however - this will be a good start. At home I have a better and more extensive collection. Your collection of tools would be totally up to you on what you feel you might have a need for.

I will admit..... A lighted headset of magnifiers that strap on your head, is a good idea. And I do have them in my “Home Set” of lens tools.

You can get repair manuals for most lenses that where and are in production. Remember that “GOGGLE” is Your Friend.
